

3rd Meeting of the Scientific Committee

Port Vila, Vanuatu
28 September - 3 October 2015

SC-03-11

Fishing vessels as scientific platforms: Report of activities 2014-15

F. Gerlotto, R. Bernales, S. Peraltilla, M. Gutierrez & P. Trillo

3rd Scientific Committee Meeting

Port Vila, Vanuatu, 28 September - 3 October 2015

Fishing vessels as scientific platforms: Report of activities, 2014–2015.

François Gerlotto ¹, Ricardo Bernales², Salvador Peraltilla ², Mariano Gutierrez³, Pedro Trillo¹

1. IREA (Instituto de Recursos Acuáticos), Lima, Peru (www.irea.org.pe)
2. SNP (Sociedad Nacional de Pesquerías, Lima, Peru (www.snp.org.pe))
3. Universidad Federico Villarreal, Lima, Peru (www.unfv.edu.pe)

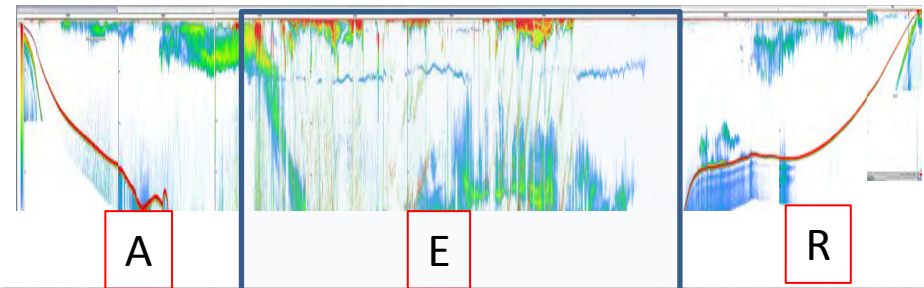

Protocol for analyzing a single trip

A: route to the fishing grounds; E: exploration and fishing; R: return to the harbor

The difference in shape between A and R compared to E allowed the separation of the trip in 3 parts.

Echogram of the whole trip

Sv (blue) and NASC per school (red) during the trip. EDSU: 0.5 nautical mile

Drawing of the routes and CJM abundance

- Time-spatial location of fishery resources and an indication of “skippers behaviour”
- Time-spatial distribution of preys (krill, zooplankton, mesopelagic fish, all micronekton)
- Continuous measurement of functioning of ecosystem indexes: thermocline, oxycline, internal waves, biovolume, fish and prey abundance etc.
- Detection of top predators and visual identification in the acoustic systems.
- Multifrequency species identification on certain vessels equipped with more advanced systems.
- Possibility of automated acoustic detection for fishing vessels.

Oxycline

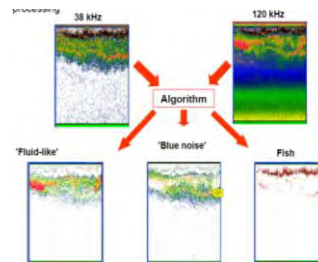

School detection

Preys-predators

Identification

Fleet Management

**Simrad ES60
Ecosonda**

**Notebook with Echoview
& communication software**

**Mapping of indicators
in real time**

April

Far North (Peru)

Threshold 20°S-25°S

Centre-South Chile

Offshore Chile

Oceanic
(this area has almost disappeared since the late 90s)

Extracted from the model.

Scale: from blue (low probability, habitat unsuitable) to red (high probability, best habitat conditions)

Black dots: fishing activities reported

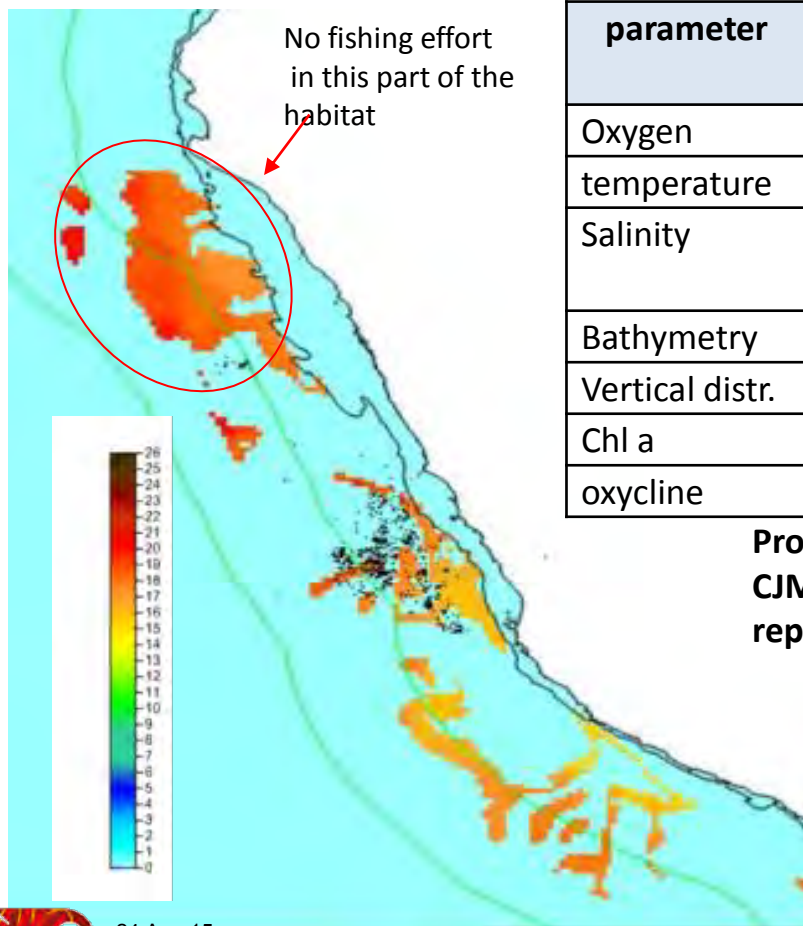

Example: potential habitat for the Far North sub-population

Limits of the jack mackerel habitat for the main environmental parameters (measured for the Peruvian area during the workshop)

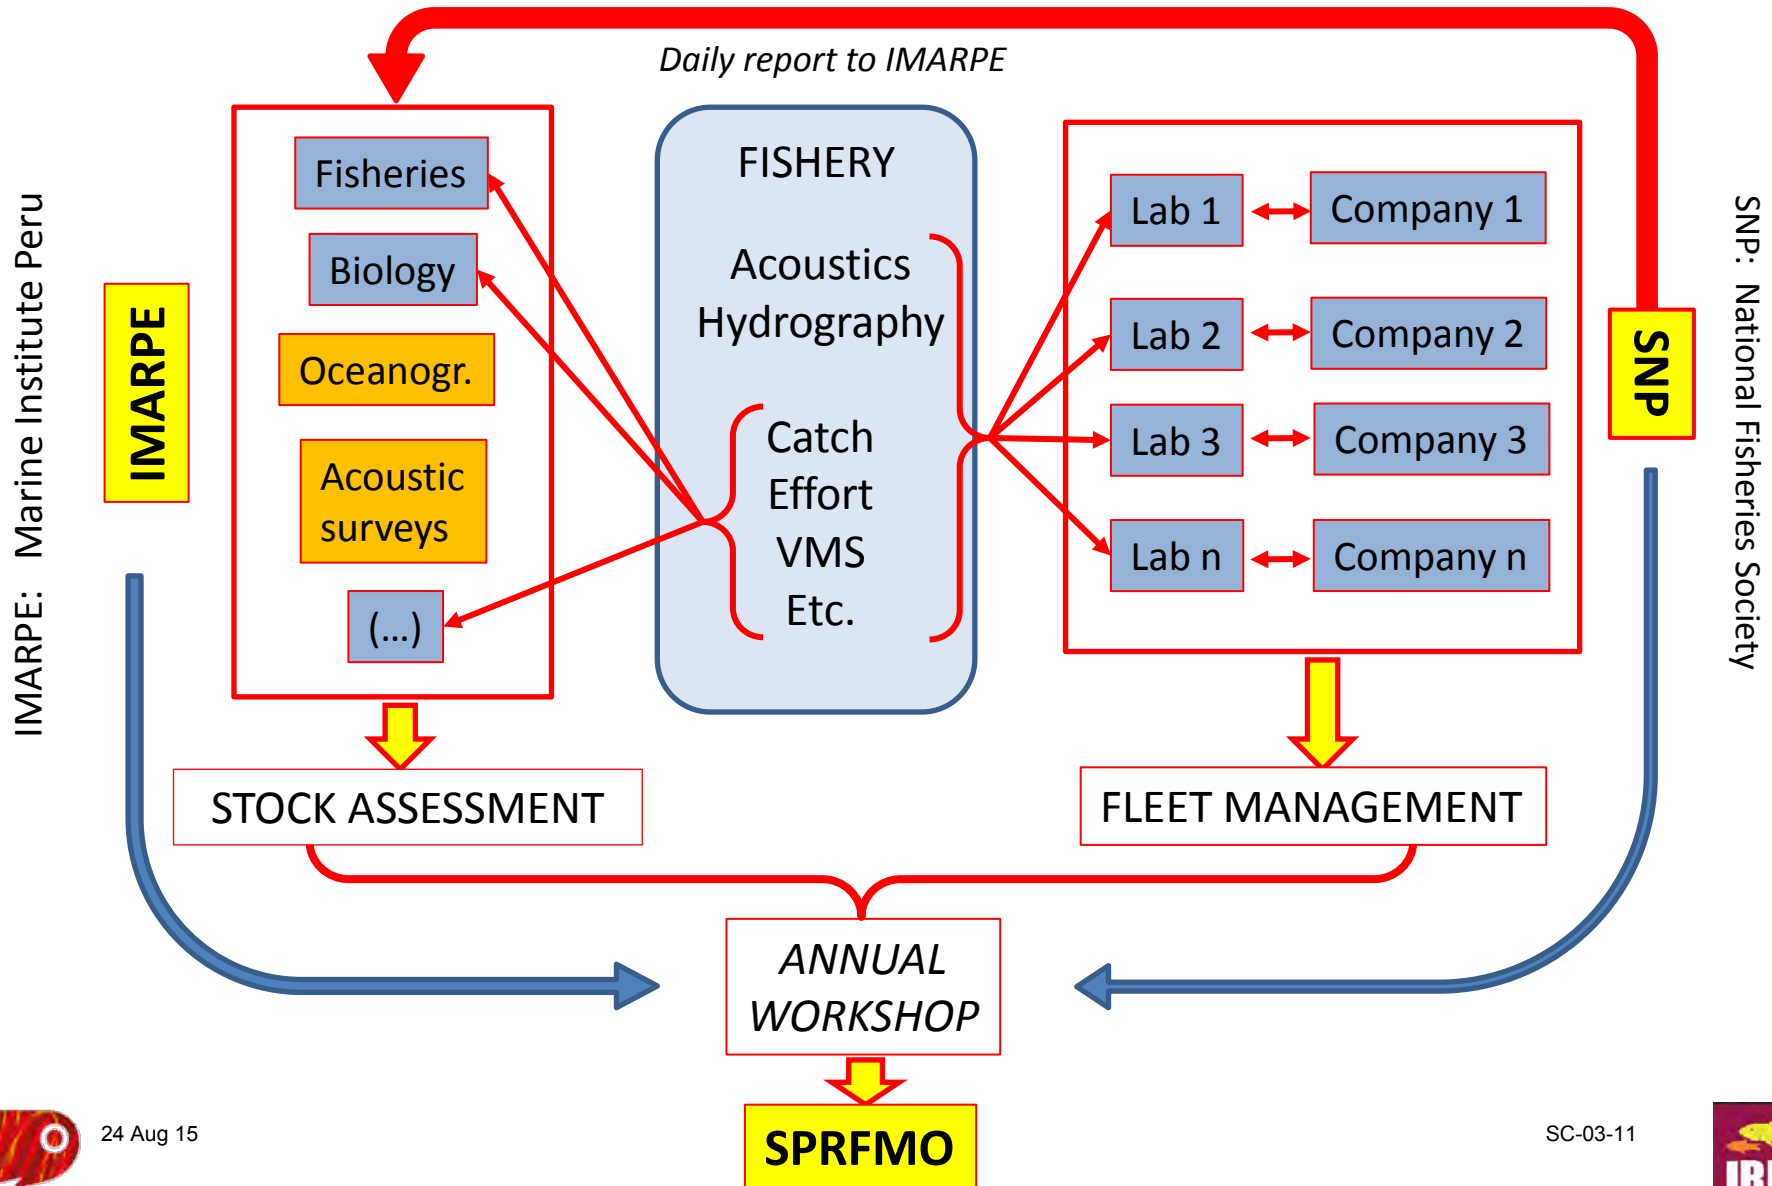

parameter	Lower limit	Upper limit	Lower preferendum	Upper preferendum
Oxygen	0.1 ml/l	-	0.2 ml/l	-
temperature	9°	26°	15°	20°
Salinity	<minimum observed	>maximum observed	34.9	35.1
Bathymetry	-	150 m	-	-
Vertical distr.	400	0	-	-
Chl a	0.07mg/m ³	26 mg/m ³	0.1	?
oxycline	-	30 m	-	40 m

Probability plot of the map of potential habitat of CJM during the 1st semester 2013. Black dots represent the fishing sets.

Need for indicators to be added:

- 3D distribution of DO*
- CJM biomass*
- ENSO situation*
- Water mass characteristics*
- Overall biomass (trophic structure) Community structure*
- Biological issues; etc.*

IMARES

Listing of Institutions using acoustic data from fishing vessels that participated in some of the task group activities:

- CCMLAR (Internacional)
- ICES (International)
- IMARPE (Perú)
- SNP (Perú, prof.)
- CSIRO (Australia)
- NIWA (Nueva Zelanda)
- SEALORD (nueva Zelanda, prof.)
- IFOP (Chile)
- INPESCA (Chile)
- INIDEP (Argentina)
- IMR (Noruega)
- IRD (Francia)
- IFREMER (Francia)
- IMARES (Holanda)
- PFA (Holanda, prof.)
- NOAA (EEUU)
- Etc...

2 expert meetings with the ICES WG FAST :

La Jolla, 2010
Reykjavik, 2011

1 International workshop organized by IREA

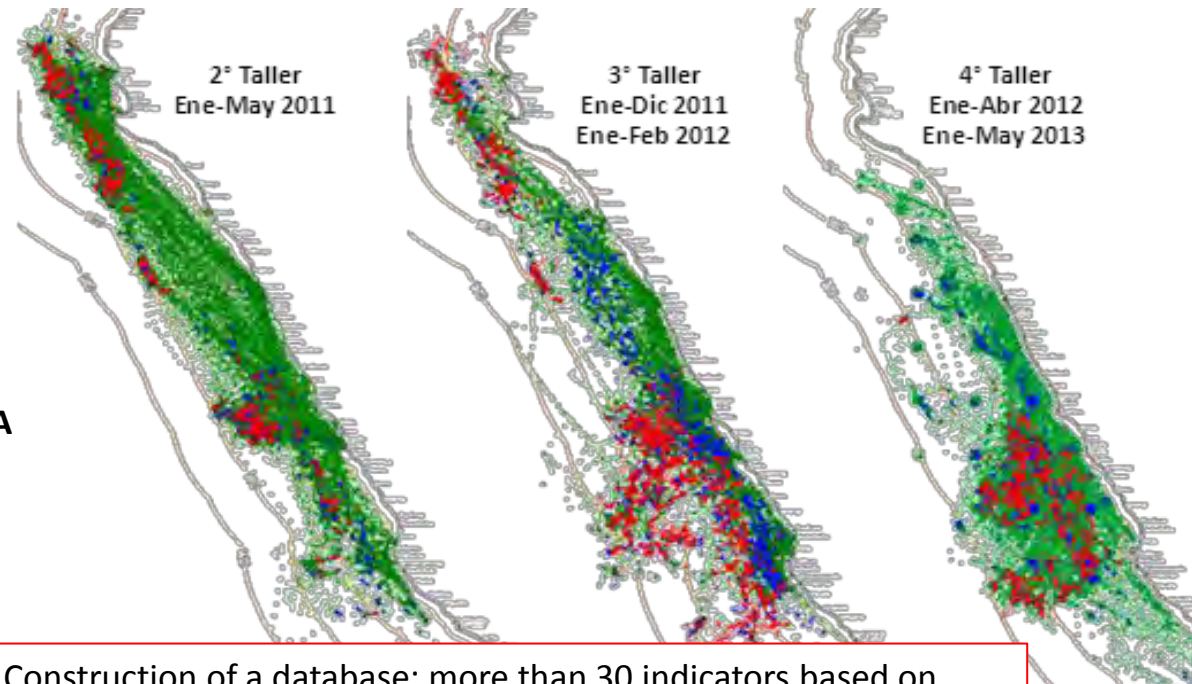

Lima, May, 2014

5 workshops organized by the SNP in Lima:

March, 2011
June, 2011
May, 2012
May, 2013
June, 2014
September, 2015

Construction of a database: more than 30 indicators based on more than 200 000 acoustic samples (ESDU) and environmental/biological/fishery information from fishing vessels

1st workshop of the SPRFMO task group organized by the SNP/IMARPE/IREA :

Lima, September, 2015

**Reports presented at the SPRFMO Scientific Committees
(2012, 2013, 2014, 2015)**

Presentations of papers to COP21, Lima, Dec. 2014:

- Bernales et al. (SNP)
- Gerlotto et al. (IREA)

Elaboration of a common agreement between fisheries organizations of Peru, Chile, Ecuador (SNP)
COP21, Lima, dec. 2014. Signed by SNP, (chilenos y ecuatorianos?)

Presentations of papers to the 6th ICES International Symposium on Marine Ecosystem Acoustics, Nantes, June 2015

- Bernales et al., 2015 (SNP)
- Gerlotto et al., 2015 (IREA)
- Joo et al., 2015 (IMARPE)

Presentation of the Peruvian System of F/V data management, PFA International Workshop , Amsterdam, June 2015

- Bernales and Gerlotto, 2015.

Proposal for the organisation of a ICES study Group on fishing vessels as Scientific Platforms.

- Approved by ICES WGFAST.
- A related Theme Session will be organized during the ICES Annual Science Conference in 2016

Preparation of a Special issue of Fisheries Research on the theme of “Fishing Vessels as Scientific Platforms

Date: 8-11 September, 2015

Objectives of the workshop:

- **Standard calibration.** Use of standard techniques and methods as developed in ICES CRR 326. Ideally, one calibration yearly.
- **Specific calibration methods for fishing vessels.** This is not a calibration per se but allows checking whether the general performances of the system is likely nominal. Use of integration of the seafloor, etc. One measurement at each trip.
- **daily test of the system,** by measurement of ambient noise (use of the echo sounder in passive mode, i.e. without transmission) during a few minutes every day.
- **Analysis of case studies** on existing experiments
- **Edition of a draft document** presenting a protocol for calibration of acoustic devices aboard fishing vessels. To be submitted to SPRFMO during the 3rd meeting of the Scientific Committee

- **2015. ICES COOPERATIVE RESEARCH REPORT 326** (available on www.ices.dk).
- **2009. Guidelines for Acoustic Data Collection aboard Fishing Vessels operating in the SPRFMO area.** W. Karp, R. Kloser, F. Gerlotto, H. Peña, M. Gutiérrez. DRAFT, October 2009, SPRFMO DOCUMENT n° xxx (2009)

- Calibration Protocol IMARPE
- Echoview

Definition of a list of indicators and metrics needed to describe and follow the dynamics of marine ecosystems in instable regimes:

- **physical indicators** allowing to define the climatic situation (scenario) and dynamics of the ecosystem;
- **environmental and biological indicators** allowing the evaluation of the different trophic levels to obtain the distribution of a species in the whole habitat;
- **behavioural and fishery indicators** for defining the determinism of extension or shrinking of the habitat and how they affect the abundance and distribution of a fish in a changing ecosystem.

Definition of the habitat of anchovy in Peru

**DEVELOPING COMMON INSTRUMENTS IN CO-OPERATION WITH
INTERNATIONAL ORGANIZATIONS**

2nd Task group Workshop on “Fishing vessels as scientific platforms (2016, Lima?)

Potential theme(s):

Improving calibration procedure

Statistical use of acoustic data from fishers

Establishing a final list of indicators

Others?

Participation in the ICES Working Group under the ICES WGFAST gathering the different teams working on this theme (CCAMLR, NOAA, SNP, IFOP, DFO, IRD, NIWA, CSIRO, AZTI, PFA, IMR, etc.): Vigo, April 2016

Presentation of contributions to the ASC theme session on “Fishing Vessels as Scientific platforms”

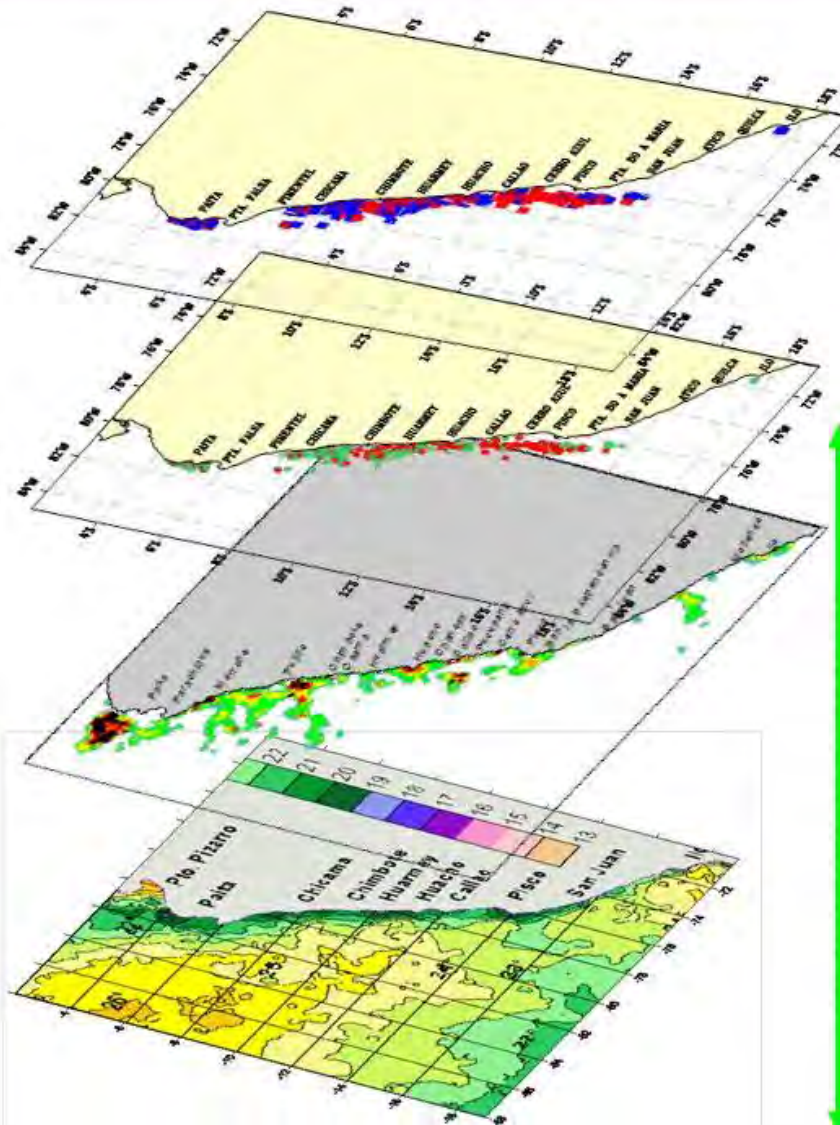

Others

ORGANIZING THE CO-OPERATION BETWEEN INDUSTRY AND RESEARCH

Origin of data

- Catch data 
- Acoustic data from fishing vessels 
- Observers onboard 
- Scientific acoustic surveys 
- Biological surveys 
- Oceanography 
- Climate studies 

Type of indicator

-  Evaluation cpue/density
-  Interactions fish/fishery
-  Dynamics/recruitment
-  Ecology
-  Behaviour micro-scale
-  Abundance estimates and distribution area fish/environment
-  Biology, interaction
-  Definition of the potential habitat

DEVELOPING NEW TOOLS FOR EXPLOITING INFORMATION FROM FISHING VESSELS

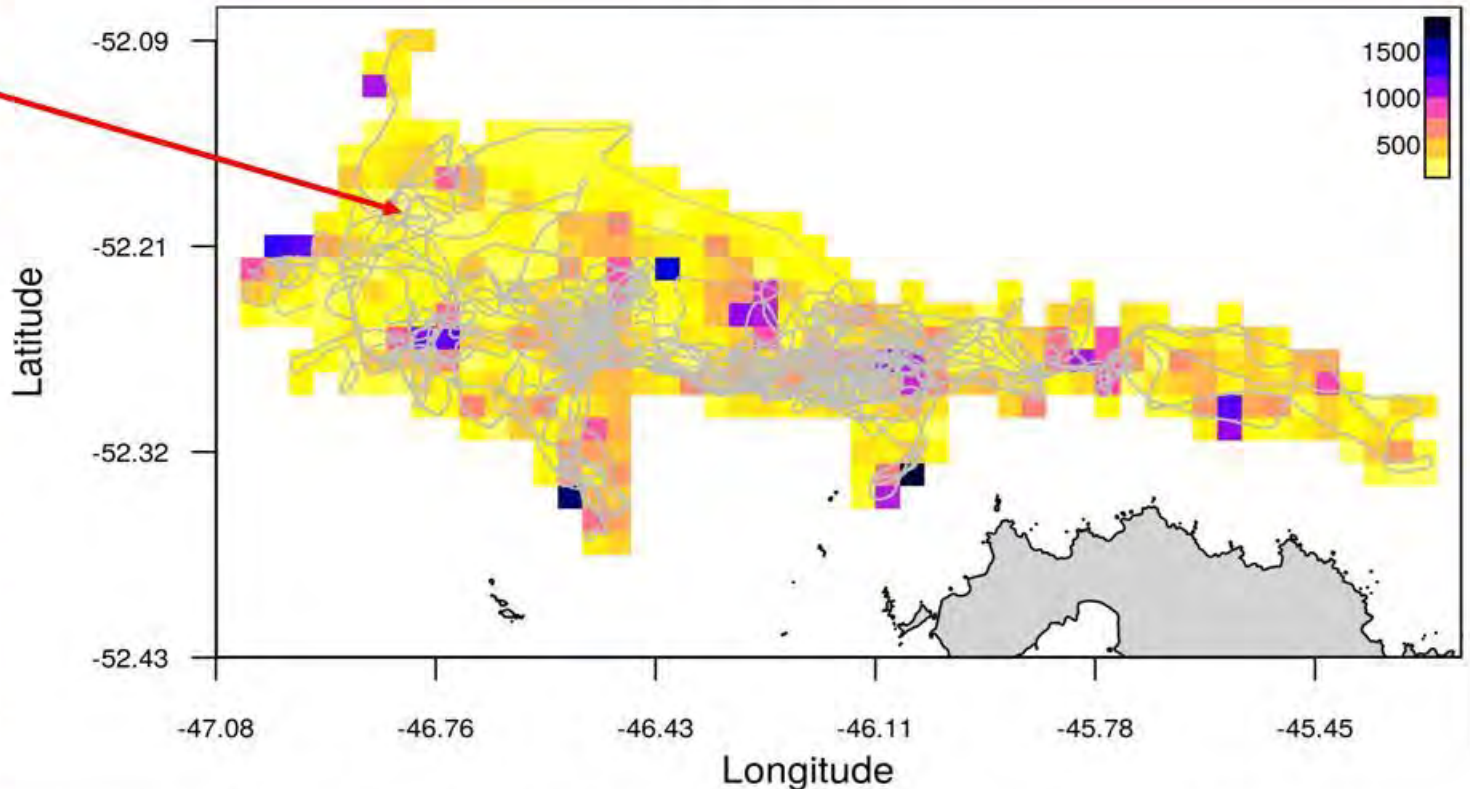

The same “predator” exploring strategy

$$P(l_j) \sim l_j^{-\mu}$$

Lévy fly when $2 < \mu < 3$

Seabird trajectories around their hatchery

Observation of krill densities in Antarctic (NASC, $m^2 mn^{-2}$) by $4 km^2$ cell, as estimated from a 5-weeks survey of one fishing vessel (among 10-12 vessels operating in the area). Grey tracks show the route of the vessel used to produce these estimates (From Niklitschek & Skaret, submitted).
